# On general Eulerian integral of certain products of Aleph-function, the 

 multivariable I-function and a class of polynomials IF.Y. AY ANT ${ }^{1}$

1 Teacher in High School, France

ABSTRACT
The object of this paper is to establish an general Eulerian integral involving the product of the Aleph-function, the multivariable I-function defined by Prasad [1], a general class of multivariable polynomials and a generalized hypergeometric function which provide unification and extension of numerous results. We will study the particular case concerning the multivariable H -function defined by Srivastava et al [8] and the Srivastava-Daoust polynomial [5].

Keywords: Eulerian integral, multivariable I-function, Lauricella function of several variables, multivariable Aleph-function, generalized hypergeometric function, multivariable H -function

2010 Mathematics Subject Classification. 33C60, 82C31

## 1.Introduction

In this paper, we evaluate a general Eulerian integral concerning the product of the multivariable Aleph-function, the multivariable I-function defined by Prasad [1], a generalized hypergeometric function and a class of multivariable polynomials. We will give a serie expansion of a Aleph-function.
The Aleph-function of several variables generalize the multivariable I-function defined by Sharma and Ahmad [4], itself is an a generalisation of G and H -functions of several variables defined by Srivastava et al [8]. The multiple Mellin-Barnes integral occuring in this paper will be referred to as the multivariables Aleph-function throughout our present study and will be defined and represented as follows.

We define $: \aleph\left(z_{1}^{\prime \prime \prime}, \cdots, z_{v}^{\prime \prime \prime}\right)=\underset{p_{i}, q_{i}, \tau_{i} ; R: p_{i(1)}, q_{i}(1), \tau_{i(1)} ; R^{(1)} ; \cdots ; p_{i(r)}, q_{i(v)} ; \tau_{i(v)} ; R^{(v)}}{0, \mathfrak{n}: m_{1}, n_{1}, \cdots, m_{2}, n_{v}}\left(\begin{array}{c}\mathrm{z}^{\prime \prime}{ }_{1} \\ \cdot \\ \cdot \\ \cdot \\ \mathrm{z}^{\prime \prime}{ }_{v}\end{array}\right.$

$$
\begin{array}{cl}
{\left[\left(\mathrm{a}_{j} ; \alpha_{j}^{(1)}, \cdots, \alpha_{j}^{(v)}\right)_{1, \mathfrak{n}}\right]} & ,\left[\tau_{i}\left(a_{j i} ; \alpha_{j i}^{(1)}, \cdots, \alpha_{j i}^{(v)}\right)_{\mathfrak{n}+1, p_{i}}\right]: \\
\ldots \ldots \ldots \ldots \ldots \ldots \ldots \cdots \cdots \cdots & ,\left[\tau_{i}\left(b_{j i} ; \beta_{j i}^{(1)}, \cdots, \beta_{j i}^{(v)}\right)_{m+1, q_{i}}\right]:
\end{array}
$$

$$
\left.\left.\left.\left[\left(\mathrm{c}_{j}^{(1)}\right) ; \gamma_{j}^{(1)}\right)_{1, n_{1}}\right],\left[\tau_{i^{(1)}}\left(c_{j i(1)}^{(1)} ; \gamma_{j i^{(1)}}^{(1)}\right)_{n_{1}+1, p_{i}^{(1)}}\right] ; \cdots ;\left[\left(\mathrm{c}_{j}^{(v)}\right) ; \gamma_{j}^{(v)}\right)_{1, n_{v}}\right],\left[\tau_{i(v)}\left(c_{j i(v)}^{(v)} ; \gamma_{j i(v)}^{(v)}\right)_{n_{v}+1, p_{i}^{(v)}}\right]\right)
$$

$$
\left.\left.\left.\left[\left(\mathrm{d}_{j}^{(1)}\right) ; \delta_{j}^{(1)}\right)_{1, m_{1}}\right],\left[\tau_{i^{(1)}}\left(d_{j i^{(1)}}^{(1)} ; \delta_{j i^{(1)}}^{(1)}\right)_{m_{1}+1, q_{i}^{(1)}}\right] ; \cdots ;\left[\left(\mathrm{d}_{j}^{(v)}\right) ; \delta_{j}^{(v)}\right)_{1, m_{v}}\right],\left[\tau_{i(v)}\left(d_{j i(v)}^{(v)} ; \delta_{j i^{(v)}}^{(v)}\right)_{m_{v}+1, q_{i}^{(v)}}\right]\right)
$$

$$
\begin{equation*}
=\frac{1}{(2 \pi \omega)^{v}} \int_{L_{1}} \cdots \int_{L_{v}} \psi_{1}\left(s_{1}, \cdots, s_{v}\right) \prod_{k=1}^{v} \xi_{k}\left(s_{k}\right) z_{k}^{\prime \prime \prime s_{k}} \mathrm{~d} s_{1} \cdots \mathrm{~d} s_{r} \tag{1.1}
\end{equation*}
$$

with $\omega=\sqrt{-1}$
$\psi_{1}\left(s_{1}, \cdots, s_{v}\right)=\frac{\prod_{j=1}^{\mathfrak{n}} \Gamma\left(1-a_{j}+\sum_{k=1}^{v} \alpha_{j}^{(k)} s_{k}\right)}{\sum_{i=1}^{R}\left[\tau_{i} \prod_{j=\mathfrak{n}+1}^{p_{i}} \Gamma\left(a_{j i}-\sum_{k=1}^{v} \alpha_{j i}^{(k)} s_{k}\right) \prod_{j=1}^{q_{i}} \Gamma\left(1-b_{j i}+\sum_{k=1}^{v} \beta_{j i}^{(k)} s_{k}\right)\right]}$
and $\xi_{k}\left(s_{k}\right)=\frac{\prod_{j=1}^{m_{k}} \Gamma\left(d_{j}^{(k)}-\delta_{j}^{(k)} s_{k}\right) \prod_{j=1}^{n_{k}} \Gamma\left(1-c_{j}^{(k)}+\gamma_{j}^{(k)} s_{k}\right)}{\sum_{i^{(k)}=1}^{R^{(k)}}\left[\tau_{i^{(k)}} \prod_{j=m_{k}+1}^{q_{i(k)}} \Gamma\left(1-d_{j i(k)}^{(k)}+\delta_{j i(k)}^{(k)} s_{k}\right) \prod_{j=n_{k}+1}^{p_{i}(k)} \Gamma\left(c_{j i(k)}^{(k)}-\gamma_{j i^{(k)}}^{(k)} s_{k}\right)\right]}$
Suppose, as usual , that the parameters
$a_{j}, j=1, \cdots, p ; b_{j}, j=1, \cdots, q ;$
$c_{j}^{(k)}, j=1, \cdots, n_{k} ; c_{j i^{(k)}}^{(k)}, j=n_{k}+1, \cdots, p_{i^{(k)}} ;$
$d_{j}^{(k)}, j=1, \cdots, m_{k} ; d_{j i(k)}^{(k)}, j=m_{k}+1, \cdots, q_{i^{(k)}} ;$
with $k=1 \cdots, r, i=1, \cdots, R, i^{(k)}=1, \cdots, R^{(k)}$
are complex numbers, and the $\alpha^{\prime} s, \beta^{\prime} s, \gamma^{\prime} s$ and $\delta^{\prime} s$ are assumed to be positive real numbers for standardization purpose such that

$$
\begin{align*}
& U_{i}^{(k)}=\sum_{j=1}^{\mathfrak{n}} \alpha_{j}^{(k)}+\tau_{i} \sum_{j=\mathfrak{n}+1}^{p_{i}} \alpha_{j i}^{(k)}+\sum_{j=1}^{n_{k}} \gamma_{j}^{(k)}+\tau_{i^{(k)}} \sum_{j=n_{k}+1}^{p_{i}(k)} \gamma_{j i}^{(k)}-\tau_{i} \sum_{j=1}^{q_{i}} \beta_{j i}^{(k)}-\sum_{j=1}^{m_{k}} \delta_{j}^{(k)} \\
& -\tau_{i(k)} \sum_{j=m_{k}+1}^{q_{i}(k)} \delta_{j i^{(k)}}^{(k)} \leqslant 0 \tag{1.4}
\end{align*}
$$

The reals numbers $\tau_{i}$ are positives for $i=1$ to $R, \tau_{i(k)}$ are positives for $i^{(k)}=1$ to $R^{(k)}$
The contour $L_{k}$ is in the $s_{k}$-p lane and run from $\sigma-i \infty$ to $\sigma+i \infty$ where $\sigma$ is a real number with loop, if necessary ,ensure that the poles of $\Gamma\left(d_{j}^{(k)}-\delta_{j}^{(k)} s_{k}\right)$ with $j=1$ to $m_{k}$ are separated from those of $\Gamma\left(1-a_{j}+\sum_{i=1}^{r} \alpha_{j}^{(k)} s_{k}\right)$ with $j=1$ to $n$ and $\Gamma\left(1-c_{j}^{(k)}+\gamma_{j}^{(k)} s_{k}\right)$ with $j=1$ to $n_{k}$ to the left of the contour $L_{k}$. The condition for absolute convergence of multiple Mellin-Barnes type contour (1.9) can be obtained by extension of the corresponding conditions for multivariable H -function given by as :
$\left|\arg z_{k}^{\prime \prime \prime}\right|<\frac{1}{2} A_{i}^{(k)} \pi$, where

$$
\begin{align*}
& A_{i}^{(k)}=\sum_{j=1}^{\mathfrak{n}} \alpha_{j}^{(k)}-\tau_{i} \sum_{j=\mathfrak{n}+1}^{p_{i}} \alpha_{j i}^{(k)}-\tau_{i} \sum_{j=1}^{q_{i}} \beta_{j i}^{(k)}+\sum_{j=1}^{n_{k}} \gamma_{j}^{(k)}-\tau_{i(k)} \sum_{j=n_{k}+1}^{p_{i}(k)} \gamma_{j i}^{(k)} \\
& +\sum_{j=1}^{m_{k}} \delta_{j}^{(k)}-\tau_{i(k)} \sum_{j=m_{k}+1}^{q_{i}(k)} \delta_{j i(k)}^{(k)}>0, \text { with } k=1, \cdots, v, i=1, \cdots, R, i^{(k)}=1, \cdots, R^{(k)} \tag{1.5}
\end{align*}
$$

The complex numbers $z_{i}$ are not zero.Throughout this document, we assume the existence and absolute convergence conditions of the multivariable Aleph-function.

We may establish the the asymptotic expansion in the following convenient form :
$\aleph\left(z_{1}^{\prime \prime \prime}, \cdots, z_{v}^{\prime \prime \prime}\right)=0\left(\left|z_{1}^{\prime \prime \prime}\right|^{\alpha_{1}}, \cdots,\left|z_{r}^{\prime \prime \prime}\right|^{\alpha_{r}}\right), \max \left(\left|z_{1}^{\prime \prime \prime}\right|, \cdots,\left|z_{v}^{\prime \prime \prime}\right|\right) \rightarrow 0$
$\aleph\left(z_{1}^{\prime \prime \prime}, \cdots, z_{v}^{\prime \prime \prime}\right)=0\left(\left|z_{1}^{\prime \prime \prime}\right|^{\beta_{1}}, \cdots,\left|z_{v}^{\prime \prime \prime}\right|^{\beta_{r}}\right), \min \left(\left|z_{1}^{\prime \prime \prime}\right|, \cdots,\left|z_{v}^{\prime \prime \prime}\right|\right) \rightarrow \infty$
where $k=1, \cdots, r: \alpha_{k}=\min \left[\operatorname{Re}\left(d_{j}^{(k)} / \delta_{j}^{(k)}\right)\right], j=1, \cdots, m_{k}$ and

$$
\beta_{k}=\max \left[\operatorname{Re}\left(\left(c_{j}^{(k)}-1\right) / \gamma_{j}^{(k)}\right)\right], j=1, \cdots, n_{k}
$$

Serie representation of Aleph-function of $u$-variables is given by

$$
\aleph\left(z_{1}^{\prime \prime \prime}, \cdots, z_{v}^{\prime \prime \prime}\right)=\sum_{G_{1}, \cdots, G_{v}=0}^{\infty} \sum_{g_{1}=0}^{m_{1}} \cdots \sum_{g_{v}=0}^{m_{v}} \frac{(-)^{G_{1}+\cdots+G_{v}}}{\delta_{g_{1}} G_{1}!\cdots \delta_{g_{v}} G_{v}!} \psi_{1}\left(\eta_{G_{1}, g_{1}}, \cdots, \eta_{G_{v}, g_{v}}\right)
$$

$$
\begin{equation*}
\times \xi_{1}\left(\eta_{G_{1}, g_{1}}\right) \cdots \xi_{v}\left(\eta_{G_{v}, g_{v}}\right) z_{1}^{-\eta_{G_{1}, g_{1}}} \cdots z_{v}^{-\eta_{G_{v}, g_{v}}} \tag{1.6}
\end{equation*}
$$

Where $\psi(., \cdots,),. \theta_{i}(),. i=1, \cdots, r$ are given respectively in (1.2), (1.3) and

$$
\eta_{G_{1}, g_{1}}=\frac{d_{g_{1}}^{(1)}+G_{1}}{\delta_{g_{1}}^{(1)}}, \cdots, \eta_{G_{v}, g_{v}}=\frac{d_{g_{v}}^{(v)}+G_{v}}{\delta_{g_{v}}^{(v)}}
$$

which is valid under the conditions $\delta_{g_{i}}^{(i)}\left[d_{j}^{i}+p_{i}\right] \neq \delta_{j}^{(i)}\left[d_{g_{i}}^{i}+G_{i}\right]$

$$
\begin{equation*}
\text { for } j \neq m_{i}, m_{i}=1, \cdots \eta_{G_{i}, g_{i}} ; p_{i}, n_{i}=0,1,2, \cdots, ; y_{i} \neq 0, i=1, \cdots, v \tag{1.8}
\end{equation*}
$$

The multivariable I-function of r-variables is defined in term of multiple Mellin-Barnes type integral :

$$
I\left(z_{1}, z_{2}, \ldots z_{r}\right)=I_{p_{2}, q_{2}, p_{3}, q_{3} ; \cdots ; p_{r}, q_{r}: p^{(1)}, q^{(1)} ; \cdots ; p^{(r)}, q^{(r)}}^{0, n_{2} ; 0, n_{3} ; \cdots ; 0, n_{r}: m^{(1)}, n^{(1)} \cdots ; m^{(r)}, n^{(r)}}\left(\begin{array}{c}
\mathrm{z}_{1} \\
\cdot \\
\cdot \\
\cdot \\
\cdot \\
\mathrm{z}_{r}
\end{array}\right)\left(\mathrm{a}_{2 j} ; \alpha_{2 j}^{\prime}, \alpha_{2 j}^{\prime \prime}\right)_{1, p_{2}} ; \cdots ;
$$

$$
\left.\begin{array}{l}
\left(\mathrm{a}_{r j} ; \alpha_{r j}^{(1)}, \cdots, \alpha_{r j}^{(r)}\right)_{1, p_{r}}:\left(a_{j}^{(1)}, \alpha_{j}^{(1)}\right)_{1, p^{(1)}} ; \cdots ;\left(a_{j}^{(r)}, \alpha_{j}^{(r)}\right)_{1, p^{(r)}} \\
\left(\mathrm{b}_{r j} ; \beta_{r j}^{(1)}, \cdots, \beta_{r j}^{(r)}\right)_{1, q_{r}}:\left(b_{j}^{(1)}, \beta_{j}^{(1)}\right)_{1, q^{(1)}} ; \cdots ;\left(b_{j}^{(r)}, \beta_{j}^{(r)}\right)_{1, q^{(r)}}
\end{array}\right)
$$

The defined integral of the above function, the existence and convergence conditions, see Y,N Prasad [1]. Throughout the present document, we assume that the existence and convergence conditions of the multivariable I-function.

The condition for absolute convergence of multiple Mellin-Barnes type contour (1.9) can be obtained by extension of the corresponding conditions for multivariable H -function given by as :
$\left|\arg z_{i}\right|<\frac{1}{2} \Omega_{i} \pi$, where
$\Omega_{i}=\sum_{k=1}^{n^{(i)}} \alpha_{k}^{(i)}-\sum_{k=n^{(i)}+1}^{p^{(i)}} \alpha_{k}^{(i)}+\sum_{k=1}^{m^{(i)}} \beta_{k}^{(i)}-\sum_{k=m^{(i)}+1}^{q^{(i)}} \beta_{k}^{(i)}+\left(\sum_{k=1}^{n_{2}} \alpha_{2 k}^{(i)}-\sum_{k=n_{2}+1}^{p_{2}} \alpha_{2 k}^{(i)}\right)+\cdots+$

$$
\begin{equation*}
\left(\sum_{k=1}^{n_{s}} \alpha_{s k}^{(i)}-\sum_{k=n_{s}+1}^{p_{s}} \alpha_{s k}^{(i)}\right)-\left(\sum_{k=1}^{q_{2}} \beta_{2 k}^{(i)}+\sum_{k=1}^{q_{3}} \beta_{3 k}^{(i)}+\cdots+\sum_{k=1}^{q_{s}} \beta_{s k}^{(i)}\right) \tag{1.11}
\end{equation*}
$$

where $i=1, \cdots, r$
The complex numbers $z_{i}$ are not zero.Throughout this document, we assume the existence and absolute convergence conditions of the multivariable I-function.
We may establish the the asymptotic expansion in the following convenient form :
$I\left(z_{1}, \cdots, z_{r}\right)=0\left(\left|z_{1}\right|^{\alpha_{1}}, \cdots,\left|z_{r}\right|^{\alpha_{r}}\right), \max \left(\left|z_{1}\right|, \cdots,\left|z_{r}\right|\right) \rightarrow 0$
$I\left(z_{1}, \cdots, z_{r}\right)=0\left(\left|z_{1}\right|^{\beta_{1}}, \cdots,\left|z_{r}\right|^{\beta_{r}}\right), \min \left(\left|z_{1}\right|, \cdots,\left|z_{r}\right|\right) \rightarrow \infty$
where $k=1, \cdots, r: \alpha_{k}^{\prime}=\min \left[\operatorname{Re}\left(b_{j}^{(k)} / \beta_{j}^{(k)}\right)\right], j=1, \cdots, m_{k}$ and

$$
\beta_{k}^{\prime}=\max \left[\operatorname{Re}\left(\left(a_{j}^{(k)}-1\right) / \alpha_{j}^{(k)}\right)\right], j=1, \cdots, n_{k}
$$

We will use these following notations in this section :
$U_{r}=p_{2}, q_{2} ; p_{3}, q_{3} ; \cdots ; p_{r-1}, q_{r-1} ; V_{r}=0, n_{2} ; 0, n_{3} ; \cdots ; 0, n_{r-1}$
$W_{r}=\left(p^{(1)}, q^{(1)}\right) ; \cdots ;\left(p^{(r)}, q^{(r)}\right) ; X_{r}=\left(m^{(1)}, n^{(1)}\right) ; \cdots ;\left(m^{(r)}, n^{(r)}\right)$
$A=\left(a_{2 k} ; \alpha_{2 k}^{(1)}, \alpha_{2 k}^{(2)}\right) ; \cdots ;\left(a_{(r-1) k} ; \alpha_{(r-1) k}^{(1)}, \alpha_{(r-1) k}^{(2)}, \cdots, \alpha_{(r-1) k}^{(r-1)}\right)$
$B=\left(b_{2 k} ; \beta_{2 k}^{(1)}, \beta_{2 k}^{(2)}\right) ; \cdots ;\left(b_{(r-1) k} ; \beta_{(r-1) k}^{(1)}, \beta_{(r-1) k}^{(2)}, \cdots, \beta_{(r-1) k}^{(r-1)}\right)$
$\mathfrak{A}=\left(a_{r k} ; \alpha_{r k}^{(1)}, \alpha_{r k}^{(2)}, \cdots, \alpha_{r k}^{(r)}\right): \mathfrak{B}=\left(b_{r k} ; \beta_{r k}^{(1)}, \beta_{r k}^{(2)}, \cdots, \beta_{r k}^{(r)}\right)$
$A_{1}=\left(a_{k}^{(1)}, \alpha_{k}^{(1)}\right)_{1, p^{(1)}} ; \cdots ;\left(a_{k}^{(r)}, \alpha_{k}^{(r)}\right)_{1, p^{(r)}} ; B_{1}=\left(b_{k}^{(1)}, \beta_{k}^{(1)}\right)_{1, q^{(1)}} ; \cdots ;\left(b_{k}^{(r)}, \beta_{k}^{(r)}\right)_{1, q^{(r)}}$
The multivariable I-function of r-variables write :
$I\left(z_{1}, \cdots, z_{r}\right)=I_{U_{r}: p_{r}, q_{r} ; W_{r}}^{V_{r} ; 0, n_{r} ; X_{r}}\left(\begin{array}{c|c}\mathrm{z}_{1} & \mathrm{~A} ; \mathfrak{A} ; \mathrm{A}_{1} \\ \cdot & \\ \cdot & \\ \cdot & \mathrm{~B} ; \mathfrak{B} ; \mathrm{B}_{1}\end{array}\right)$

Srivastava and Garg [6] introduced and defined a general class of multivariable polynomials as follows

$$
\begin{equation*}
S_{L}^{h_{1}, \cdots, h_{u}}\left[z_{1}, \cdots, z_{u}\right]=\sum_{R_{1}, \cdots, R_{u}=0}^{h_{1} R_{1}+\cdots h_{u} R_{u} \leqslant L}(-L)_{h_{1} R_{1}+\cdots+h_{u} R_{u}} B\left(E ; R_{1}, \cdots, R_{u}\right) \frac{z_{1}^{R_{1}} \cdots z_{u}^{R_{u}}}{R_{1}!\cdots R_{u}!} \tag{1.19}
\end{equation*}
$$

The coefficients are $B\left[E ; R_{1}, \ldots, R_{v}\right]$ arbitrary constants, real or complex.

## 2. Integral representation of generalized Lauricella function of several variables

The following generalized hypergeometric function in terms of multiple contour integrals is also required [7, page 39 eq .30]
$\frac{\prod_{j=1}^{P} \Gamma\left(A_{j}\right)}{\prod_{j=1}^{Q} \Gamma\left(B_{j}\right)}{ }_{P} F_{Q}\left[\left(A_{P}\right) ;\left(B_{Q}\right) ;-\left(x_{1}+\cdots+x_{r}\right)\right]$
$=\frac{1}{(2 \pi \omega)^{r}} \int_{L_{1}} \cdots \int_{L_{r}} \frac{\prod_{j=1}^{P} \Gamma\left(A_{j}+s_{1}+\cdots+s_{r}\right)}{\prod_{j=1}^{Q} \Gamma\left(B_{j}+s_{1}+\cdots+s_{r}\right)} \Gamma\left(-s_{1}\right) \cdots \Gamma\left(-s_{r}\right) x_{1}^{s_{1}} \cdots x_{r}^{s_{r}} \mathrm{~d} s_{1} \cdots \mathrm{~d} s_{r}$
where the contours are of Barnes type with indentations, if necessary, to ensure that the poles of $\Gamma\left(A_{j}+s_{1}+\cdots+s_{r}\right)$ are separated from those of $\Gamma\left(-s_{j}\right), j=1, \cdots, r$. The above result (1.23) can be easily established by an appeal to the calculus of residues by calculating the residues at the poles of $\Gamma\left(-s_{j}\right), j=1, \cdots, r$

In order to evaluate a number of integrals of multivariable I-function, we first establish the formula
$\int_{a}^{b}(t-a)^{\alpha-1}(b-t)^{\beta-1} \prod_{j=1}^{l}\left[1-\tau_{j}(t-a)^{h_{i}}\right]^{-\lambda_{j}} \prod_{j=1}^{k}\left(f_{j} t+g_{j}\right)^{\sigma_{j}} \mathrm{~d} t=(b-a)^{\alpha+\beta-1} B(\alpha, \beta) \prod_{j=1}^{k}\left(a f_{j}+g_{j}\right)^{\sigma_{j}}$
$F_{1: 0, \cdots, 0 ; 0, \cdots, 0}^{1: 1, \ldots, 1 ; 1 \cdots, 1}\left(\begin{array}{c}\left(\alpha: h_{1}, \cdots, h_{l}, 1, \cdots, 1\right):\left(\lambda_{1}: 1\right), \cdots,\left(\lambda_{l}: 1\right) ;\left(-\sigma_{1}: 1\right), \cdots,\left(-\sigma_{k}: 1\right) \\ \cdots \\ \left(\alpha+\beta: h_{1}, \cdots, h_{l}, 1, \cdots, 1\right):-, \cdots,-;-, \cdots,-\end{array}\right.$
$\left.; \tau_{1}(b-a)^{h_{1}}, \cdots, \tau_{l}(b-a)^{h_{l}},-\frac{(b-a) f_{1}}{a f_{1}+g_{1}}, \cdots,-\frac{(b-a) f_{k}}{a f_{k}+g_{k}}\right)$
where $a, b \in \mathbb{R}(a<b), \alpha, \beta, f_{i}, g_{i}, \sigma_{i}, \tau_{j}, h_{j} \in \mathbb{C}, \lambda_{j} \in \mathbb{R}^{+}(i=1, \cdots, k ; j=1, \cdots, l)$
$\min (\operatorname{Re}(\alpha), \operatorname{Re}(\beta))>0, \max _{1 \leqslant j \leqslant l}\left\{\left|\tau_{j}(b-a)^{h_{j}}\right|\right\}<1, \max _{1 \leqslant j \leqslant k}\left\{\left|\frac{(b-a) f_{i}}{a f_{i}+g_{i}}\right|\right\}<1$,
and $F_{1: 0, \cdots, 0 ; 0, \cdots, 0}^{1: 1, \cdots, 1 ; 1 \cdots, 1}$ is a particular case of the generalized Lauricella function introduced by Srivastava-Daoust[5,page 454] given by :
$\underset{\substack{1: 0, \cdots, 0 ; 0, \cdots, 0}}{1: 1, \cdots, 1 ; 1 \cdots, 1}\left(\begin{array}{c}\left(\alpha: h_{1}, \cdots, h_{l}, 1, \cdots, 1\right):\left(\lambda_{1}: 1\right), \cdots,\left(\lambda_{l}: 1\right) ;\left(-\sigma_{1}: 1\right), \cdots,\left(-\sigma_{k}: 1\right) \\ \\ \left(\alpha+\beta: h_{1}, \cdots, h_{l}, 1, \cdots, 1\right):-, \cdots,-;-, \cdots,-\end{array}\right.$

$$
\begin{align*}
& \left.; \tau_{1}(b-a)^{h_{1}}, \cdots, \tau_{l}(b-a)^{h_{l}},-\frac{(b-a) f_{1}}{a f_{1}+g_{1}}, \cdots,-\frac{(b-a) f_{k}}{a f_{k}+g_{k}}\right)=\frac{\Gamma(\alpha+\beta)}{\Gamma(\alpha) \prod_{j=1}^{l} \Gamma\left(\lambda_{j}\right) \prod_{j=1}^{k} \Gamma\left(-\sigma_{j}\right)} \\
& \frac{1}{(2 \pi \omega)^{l+k}} \int_{L_{1}} \cdots \int_{L_{l+k}} \frac{\Gamma\left(\alpha+\sum_{j=1}^{l} h_{j} w_{j}+\sum_{j=1}^{k} w_{l+j}\right)}{\Gamma\left(\alpha+\beta+\sum_{j=1}^{l} h_{j} w_{j}+\sum_{j=1}^{k} w_{l+j}\right)} \prod_{j=1}^{l} \Gamma\left(\lambda_{j}+w_{j}\right) \prod_{j=1}^{k} \Gamma\left(-\sigma_{j}+w_{l+j}\right) \\
& \prod_{j=1}^{l+k} \Gamma\left(-w_{j}\right) z_{1}^{w_{1}} \cdots z_{l}^{w_{l}} z_{l+1}^{w_{l+1}} \cdots, w_{l+k}^{w_{l+k}} \mathrm{~d} w_{1} \cdots \mathrm{~d} w_{l+k} \tag{2.3}
\end{align*}
$$

Here the contour $L_{j}^{\prime} s$ are defined by $L_{j}=L_{w \zeta_{j} \infty}\left(\operatorname{Re}\left(\zeta_{j}\right)=v_{j}^{\prime \prime}\right)$ starting at the point $v_{j}^{\prime \prime}-\omega \infty$ and terminating at the point $v_{j}^{\prime \prime}+\omega \infty$ with $v_{j}^{\prime \prime} \in \mathbb{R}(j=1, \cdots, l)$ and each of the remaining contour $L_{l+1}, \cdots, L_{l+k}$ run from $-\omega \infty$ to $\omega \infty$ (2.2) can be easily established by expanding $\prod_{j=1}^{l}\left[1-\tau_{j}(t-a)^{h_{i}}\right]^{-\lambda_{j}}$ by means of the formula : $(1-z)^{-\alpha}=\sum_{r=0}^{\infty} \frac{(\alpha)_{r}}{r!} z^{r}(|z|<1)$
integrating term by term with the help of the integral given by Saigo and Saxena [2, page 93, eq.(3.2)] and applying the definition of the generalized Lauricella function [4, page 454].

## 3. Eulerian integral

In this section, we evaluate a general Eulerian integral with the product of the multivariable Aleph-function, the multivariable I-function of Prasad, a class of multivariable polynomials and generalized hypergeometric function. We note
$B_{u}=\frac{(-L)_{h_{1} R_{1}+\cdots+h_{u} R_{u}} B\left(E ; R_{1}, \cdots, R_{u}\right)}{R_{1}!\cdots R_{u}!}$
and $B_{u, v}=(b-a)^{\sum_{i=1}^{v}\left(a_{i}^{\prime}+b_{i}^{\prime}\right) \eta_{G_{i}, g_{i}}+\sum_{i=1}^{u}\left(a_{i}+b_{i}\right) R_{i}}\left\{\prod_{j=1}^{h}\left(a f_{j}+g_{j}\right)^{-\sum_{i=1}^{v} \lambda_{i}^{\prime \prime \prime} \eta_{g_{i}, h_{i}}-\sum_{i=1}^{u} \lambda_{i}^{\prime \prime} R_{i}}\right\} G_{v}$
where $G_{v}=\psi\left(\eta_{G_{1}, g_{1}}, \cdots, \eta_{G_{v}, g_{v}}\right) \times \xi_{1}\left(\eta_{G_{1}, g_{1}}\right) \cdots \xi_{v}\left(\eta_{G_{v}, g_{v}}\right)$
$\psi_{1}, \xi_{i}, i=1, \cdots, v$ are defined respectively by (1.2) and (1.3)
$\theta_{i}=\prod_{j=1}^{l}\left[1-\tau_{j}(t-a)^{h_{i}}\right]^{-\zeta_{j}^{(i)}}, \zeta_{j}^{(i)}>0(i=1, \cdots, r) ; \theta_{i}^{\prime}=\prod_{j=1}^{l}\left[1-\tau_{j}(t-a)^{h_{i}}\right]^{-\zeta_{j}^{\prime(i)}}, \zeta_{j}^{(i)}>0(i=1, \cdots, s)$
$\theta_{i}^{\prime \prime}=\prod_{j=1}^{l}\left[1-\tau_{j}(t-a)^{h_{i}}\right]^{\left.-\zeta_{j}^{\prime \prime( }\right)}, \zeta_{j}^{\prime \prime(i)}>0(i=1, \cdots, u)$

( I ) The multiple series occuring on the right-hand side of (3.24) is absolutely and uniformly convergent.

## Proof

To prove (3.24), first, we express in serie the multivariable Aleph-function with the help of (1.6), a class of multivariable polynomials defined by Srivastava et al [6] $S_{L}^{h_{1}, \cdots, h_{u}}[$.$] in serie with the help of (1.19), the I-functions$ of r-variables defined by Prasad [1] and in terms of Mellin-Barnes type contour integral with the help of (1.10), the generalized hypergeometric function ${ }_{P} F_{Q}($.$) in Mellin-Barnes contour integral with the help of (2.1).Now collect the$ power of $\left[1-\tau_{j}(t-a)^{h_{i}}\right]$ with $(i=1, \cdots, r ; j=1, \cdots, l)$ and collect the power of $\left(f_{j} t+g_{j}\right)$ with $j=1, \cdots, k$. Use the equations (2.2) and (2.3) and express the result in Mellin-Barnes contour integral. Interpreting the $(r+s+k+l)$ dimensional Mellin-Barnes integral to multivariable I-function, we obtain the equation (3.24).

## 4. Particular cases

a) If $U=V=A=B=0$, the multivariable I-function defined by Prasad [1] reduces to multivariable H-function defined by Srivastava et al [8].

We the following generalized Eulerian integral concerning the multivariable H -function under the same notations and conditions that (3.24) with $U=V=A=B=0$
$\int_{a}^{b}(t-a)^{\alpha-1}(b-t)^{\beta-1} \prod_{j=1}^{l}\left[1-\tau_{j}(t-a)^{h_{i}}\right]^{-\lambda_{j}} \prod_{j=1}^{k}\left(f_{j} t+g_{j}\right)^{\sigma_{j}}$

under the same notations and conditions that (3.24)
where $B_{u}^{\prime}=\frac{(-L)_{h_{1} R_{1}+\cdots+h_{u} R_{u} B\left(E ; R_{1}, \cdots, R_{u}\right)}^{R_{1}!\cdots R_{u}!}, B\left[E ; R_{1}, \ldots, R_{v}\right] \text { is defined by (4.2) }}{\text { ( }}$

## Remark:

By the following similar procedure, the results of this document can be extented to product of any finite number of multivariable I-functions and a class of multivariable polynomials defined by Srivastava et al [5].

## 5. Conclusion

In this paper we have evaluated a generalized Eulerian integral involving the product of the multivariable Alephfunction, the multivariable I-function defined by Prasad [1], a class of multivariable polynomials and generalized hypergeometric function with general arguments. The formulae established in this paper is very general nature. Thus, the results established in this research work would serve as a key formula from which, upon specializing the parameters, as many as desired results involving the special functions of one and several variables can be obtained.
