# Digits in Units Place of 3-PrimeFactors Numbers till 1 Trillion 

Neeraj Anant Pande<br>Associate Professor, Department of Mathematics \& Statistics, Yeshwant Mahavidyalaya (College), Nanded-431602, Maharashtra, INDIA

#### Abstract

Owing to unknown pattern of occurrence of primes and numbers based on them, the digits occurring in them at various places have been subject to investigation. In this work, '3-PrimeFactors numbers' which have exactly 3 prime divisors, are considered for digits in their units place. All 3-PrimeFactors numbers less than 1 trillion are analyzed for digit occurrence at units place.

Keywords - Prime number, k-PrimeFactors number, 3-PrimeFactors number, Digits in units place. Mathematics Subject Classification (2010) - 11A51, 11N05, 11N80

## I. Introduction

More is known with less certainty and less is known with more certainty about prime numbers! Approximations allowed through big O notation, asymptotic values dictate limitation of our understanding about them [1].

As there are different types of prime numbers, there are different types of numbers whose classification is based upon prime numbers. One such recently identified class of numbers is that of $k$-PrimeFactors numbers [6].

Definition ( $k$-PrimeFactors Number) : For any integer $k \geq 0$, a positive integer having $k$ number of prime divisors, not necessarily distinct, is called as $k$-PrimeFactors number.

This term has generalized prime numbers on which it is itself based! A prime number happens to be 1PrimeFactor number under this. In fact, in the study of prime numbers, all natural numbers are covered except 0 . This concept covers that also as a unique number of type 0-PrimeFactors number.

For the very reason stated in first paragraph, prime numbers are needed to be exhaustively inspected individually in higher and higher ranges [3]. This requires good generating sieve-algorithms [2]. For different types of prime numbers also, such method becomes necessary [4]. Modern age of advanced computers allows todo these tasks at incredible speed. High level object oriented languages likemakes programming a fun [5].

Such approach has consistently been taken.Examples are study of 2-PrimeFactors numbers when their lowest [6] and highest densities [7] were investigated, maximum [8] and minimum spacings [9] between successive 2-PrimeFactors numbers were analysed, digits in their units place [10] and units \& tens places [11] were surveyed; similarly when lowest [12] \& highest densities [13] of 3-PrimeFactors numbers and minimum [14] \&maximumspacings [15] between them were analysed. We take 3-PrimeFactors numbers here for digits in units place.

## II. Digits in Units Place of 3-PrimeFactors Numbers

Owing to the base 10 of widely used decimal number system across the globe, in this work, we have determined decimal digits in units places of all 3-PrimeFactors numbers less than $10^{12}$.

| Sr. No. | The Digit in Units Place | Number of 3-PrimeFactors Numbers Less than 1012 with that Digit in Units Place |
| :---: | :---: | :---: |
| 1 | 0 | $4,118,054,813$ |
| 2 | 1 | $29,792,496,592$ |
| 3 | 2 | $15,664,986,961$ |
| 4 | 3 | $29,792,575,660$ |
| 5 | 4 | $15,664,929,868$ |
| 6 | 5 | $23,266,828,517$ |
| 7 | 6 | $15,664,924,331$ |
| 8 | 7 | $29,792,632,560$ |
| 9 | 8 | $15,664,999,329$ |
| 10 | 9 | $29,792,554,280$ |

These values compare with each other graphically as follows .

## III.Range-wise Digits in Units Place of 3-PrimeFactors Numbers

The values given in the previous table are for the scenarios after spanning of the complete range of 1 trillion. In next tabulation, their gradual appearance in growing ranges is presented.

| Sr. <br> No. | Range | Number of 3-PrimeFactors Numbers with Digit in Units Place |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 0 | 1 | 2 | 3 | 4 |
| 1 | $<10^{1}$ | 0 | 0 | 0 | 0 | 0 |
| 2 | $<10^{2}$ | 4 | 0 | 4 | 1 | 1 |
| 3 | $<10^{3}$ | 25 | 12 | 35 | 14 | 30 |
| 4 | $<10^{4}$ | 168 | 195 | 307 | 205 | 293 |
| 5 | $<10^{5}$ | 1,229 | 2,381 | 2,740 | 2,418 | 2,705 |
| 6 | $<10^{6}$ | 9,592 | 26,680 | 24,684 | 26,814 | 24,627 |
| 7 | $<10^{7}$ | 78,498 | 283,977 | 225,428 | 284,182 | 225,056 |
| 8 | $<10^{8}$ | 664,579 | 2,936,050 | 2,068,822 | 2,937,573 | 2,068,666 |
| 9 | $<10^{9}$ | 5,761,455 | 29,846,825 | 19,136,727 | 29,849,269 | 19,133,962 |
| 10 | $<10^{10}$ | 50,847,534 | 300,125,938 | 178,070,867 | 300,142,326 | 178,063,372 |
| 11 | $<10^{11}$ | 455,052,511 | 2,997,134,467 | 1,666,172,768 | 2,997,121,697 | 1,666,146,067 |
| 12 | $<10^{12}$ | 4,118,054,813 | 29,792,496,592 | 15,664,986,961 | 29,792,575,660 | 15,664,929,868 |

| Sr. <br> No. | Range | Number of 3-PrimeFactors Numbers with Digit in Units Place |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 5 | 6 | 7 | 8 | 9 |
| 1 | $<10^{1}$ | 0 | 0 | 0 | 1 | 0 |
| 2 | $<10^{2}$ | 2 | 2 | 1 | 6 | 1 |
| 3 | $<10^{3}$ | 37 | 29 | 19 | 34 | 12 |
| 4 | $<10^{4}$ | 409 | 287 | 198 | 310 | 197 |
| 5 | $<10^{5}$ | 3,852 | 2,699 | 2,418 | 2,737 | 2,377 |
| 6 | $<10^{6}$ | 35,638 | 24,694 | 26,740 | 24,729 | 26,655 |
| 7 | $<10^{7}$ | 328,786 | 224,929 | 284,343 | 225,363 | 283,797 |
| 8 | $<10^{8}$ | 3,039,761 | 2,068,645 | 2,937,254 | 2,069,858 | 2,936,097 |
| 9 | $<10^{9}$ | 28,231,262 | 19,132,818 | 29,848,856 | 19,137,154 | 29,846,039 |
| 10 | $<10^{10}$ | 263,471,079 | 178,067,070 | 300,135,262 | 178,072,999 | 300,125,549 |
| 11 | $<10^{11}$ | 2,470,551,647 | 1,666,145,840 | 2,997,148,380 | 1,666,152,044 | 2,997,122,488 |
| 12 | $<10^{12}$ | 23,266,828,517 | 15,664,924,331 | 29,792,632,560 | 15,664,999,329 | 29,792,554,280 |

These values were considered as percentage with respect to the total number of numbers with no restriction on digits in units places and then plotted graphically.

| \% of 3.Primefactors Numbers with 0 in Units Place | \%of 3 -Primefactors Sumbers with 1 in Units Place |
| :---: | :---: |
|  |  |
| \% of 3-PrimeFactors Numbers with 2 in Units Place |  |
| \% of 3-PrimeFactors Numbers with 4 in Units Place |  |
|  | \% of 3-PrimeFactors Numbers with 7 in Units Place |
| \% of 3-PrimeFactors Numbers with 8 in Units Place | \% of 3-PrimeFactors Numbers with 9 in Units Place |

As far as the units place digit occurrence is considered in 3-PrimeFactors numbers, odd ones 1, 3, 7, 9 dominate all even ones. The remaining odd digit 5 also dominates even digits but with a lesser intensity. Amongst even digits, 0 lags behind the most. We judge this situation.

The most occurring digits in units place of primes are $1,3,7,9$; whereas least occurring, in fact, occurring only once are 2 and 5.So when we consider 3-PrimeFactors numbers, we must inspect the outcome of product of 3 of them at time.

There are only 2 prime numbers with 2 and 5 in units place. So in following multiplicative combinations, wherever 2 or 5 is used, there is no chance of using many different numbers, in fact there is unique choice(!).

| Units Place Digit in |  |  |  |
| :---: | :---: | :---: | :---: |
| $1^{\text {st }}$ | $2^{\text {nd }}$ | $3{ }^{\text {rd }}$ | Product 3-PrimeFactors |
| Prime | Prime | Prime | Number |
| 2 | 2 | 2 | 8 |
|  |  | 5 | 0 |
|  |  | 1 | 4 |
|  |  | 3 | 2 |
|  |  | 7 | 8 |
|  |  | 9 | 6 |
|  | 5 | 5 | 0 |
|  |  | 1 | 0 |
|  |  | 3 | 0 |
|  |  | 7 | 0 |
|  |  | 9 | 0 |
|  | 1 | 1 | 2 |
|  |  | 3 | 6 |
|  |  | 7 | 4 |
|  |  | 9 | 8 |
|  | 3 | 3 | 8 |
|  |  | 7 | 2 |
|  |  | 9 | 4 |
|  | 7 | 7 | 8 |
|  |  | 9 | 6 |
|  | 9 | 9 | 2 |
| 5 | 5 | 5 | 5 |
|  |  | 1 | 5 |
|  |  | 3 | 5 |
|  |  | 7 | 5 |
|  |  | 9 | 5 |
|  | 1 | 1 | 5 |
|  |  | 3 | 5 |
|  |  | 7 | 5 |
|  |  | 9 | 5 |
|  | 3 | 3 | 5 |
|  |  | 7 | 5 |
|  |  | 9 | 5 |
|  | 7 | 7 | 5 |
|  |  | 9 | 5 |
|  | 9 | 9 | 5 |

Those combinations which are totally limited due to no choice in all 3 positions are coloured dark red, those with no choice in 2 positions are coloured in light red and those in which there is no choice in one position are coloured yellow.

Now, if we talk about multiplicative combinations of other odd digits in units place, there is ample of choice at all 3 positions and naturally we get multitude of numbers compared to above combinations.

| Units Place Digit in |  |  |  |
| :---: | :---: | :---: | :---: |
| $1{ }^{\text {st }}$ | $2^{\text {nd }}$ | $3{ }^{\text {rd }}$ | Product 3-PrimeFactors |
| Prime | Prime | Prime | Number |
| 1 | 1 | 1 | 1 |
|  |  | 3 | 3 |
|  |  | 7 | 7 |
|  |  | 9 | 9 |
|  | 3 | 3 | 9 |
|  |  | 7 | 1 |
|  |  | 9 | 7 |
|  | 7 | 7 | 9 |
|  |  | 9 | 3 |
|  | 9 | 9 | 1 |
| 3 | 3 | 3 | 7 |
|  |  | 7 | 3 |
|  |  | 9 | 1 |
|  | 7 | 7 | 7 |
|  |  | 9 | 9 |
|  | 9 | 9 | 3 |
| 7 | 7 | 7 | 3 |
|  |  | 9 | 1 |
|  | 9 | 9 | 7 |
| 9 | 9 | 9 | 1 |

All possible 20combinationsof 1, 3, 7, and 9 at all positions yield those only.
Due to this the dominance trend at the tail is bound to be found in all higher ranges.

ACKNOWLEDGMENT
This huge work could be undertaken and successfully completed by use ofall 20 multicore computers in Laboratory of the Department of Mathematics \& Statistics of authors host institute for several months. Java programming language, NetBeans IDE and Microsoft Excel were the software in action and author appreciablytakes this opportunity to thank their development teams.

The author is grateful to the referee(s) of this paper.
