# The First and Second Zagreb Indices of Degree Splitting of Graphs 

S. Ragavi<br>Assistant Professor, PG and Research Department of Mathematics, Mannar Thirumalai Naicker College, Madurai

#### Abstract

Let $G$ be simple graph. The first Zagreb index is the sum of squares of degree of vertices and second Zagreb index is the sum of the products of the degrees of pairs of adjacent vertices. In this paper, we compute the first and second Zagreb index of degree splitting of standard graphs.

Keywords - Zagreb Indices, Degree Splitting of graph.

## I. INTRODUCTION

The first and second Zagreb indices first appeared in a topological formula for the total -energy of conjugated molecules, were introduced by Gutman and Trinajstić in 1972. Since then these indices have been used as branching indices. The Zagreb indices are found to have applications in QSPR and QSAR studies.

Let G be a simple connected graphs, i.e.) connected graphs without loops and multiple edges. For a graph $G, V(G)$ and $E(G)$ denote the set of all vertices and edges respectively. For a graph $G$, the degree of a vertex $v$ is the number of edges incident to $v$ and denoted by $\operatorname{deg}(v)$. The first Zagreb index $\mathrm{M}_{1}(\mathrm{G})$ is equal to the sum of squares of the degrees of the vertices, and the second Zagreb index $M_{2}(G)$ is equal to the sum of the product of the degrees of pairs of adjacent vertices of the underlying molecular graph G.
They are defined as:

$$
\begin{gathered}
M_{1}(G)=\sum_{v \in V(G)} d(v)^{2} \\
M_{2}(G)=\sum_{u v \in E(G)} d(u) d(v)
\end{gathered}
$$

Let $G=(V, E)$ be a graph with $V=S_{1} \cup S_{2} \cup \cdots \cup S_{t} \cup T$ where each $S_{i}$ is a set of vertices having at least two vertices and having the same degree and $\mathrm{T}=\mathrm{V}-\cup \mathrm{S}_{\mathrm{i}}$. The degree splitting graph of G is denoted by $\mathrm{DS}(\mathrm{G})$ is obtained from $G$ by adding vertices $w_{1}, w_{2}, \cdots, w_{t}$ and joining $w_{i}$ to each vertex of $S_{i}(1 \leq i \leq t)$.

My research is to find the first and second Zagreb index of degree splitting of graphs like Paths, Cycle, Wheel, Complete Graph, Star,Complete Bi-partite Graphs, Path Corona and Cycle corona.

Theorem 1: For a Path $P_{n}, n \geq 3, M_{1}\left(D S\left(P_{n}\right)\right)=n^{2}+5 n-6, M_{2}\left(D S\left(P_{n}\right)\right)=3 n^{2}-3 n+5$. Proof:

Let $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n}}$ be the vertices of $\mathrm{P}_{\mathrm{n}}$. Let $\mathrm{w}_{1}$ and $\mathrm{w}_{2}$ be the degree splitting vertices in which $\mathrm{w}_{1}$ is adjacent to the end vertices and $w_{2}$ is adjacent to the remaining vertices.
Then, $d\left(v_{i}\right)=\left\{\begin{array}{cc}2 & i=1, n \\ 3 & \text { otherwise }\end{array}, d\left(w_{1}\right)=2, d\left(w_{2}\right)=n-2\right.$.

$$
\begin{aligned}
M_{1}\left(D S\left(P_{n}\right)\right) & =\sum_{i=1}^{n} d\left(v_{i}\right)^{2}+\sum_{i=1}^{2} d\left(w_{i}\right)^{2} \\
& =d\left(v_{1}\right)^{2}+\sum_{i=2}^{n-2} d\left(v_{i}\right)^{2}+d\left(v_{n}\right)^{2}+d\left(w_{1}\right)^{2}+d\left(w_{2}\right)^{2} \\
& =2^{2}+\sum_{i=2}^{n-2} 3^{2}+2^{2}+2^{2}+(n-2)^{2} \\
& =n^{2}+5 n-6
\end{aligned}
$$

$$
\begin{aligned}
M_{2}\left(D S\left(P_{n}\right)\right) & =\sum_{u v \in E} d(u) d(v) \\
& =d\left(v_{1}\right) d\left(v_{2}\right)+d\left(v_{n-1}\right) d\left(v_{n}\right)+\sum_{i=1}^{n-1} d\left(v_{i}\right) d\left(v_{i+1}\right)+\sum_{i \neq 1, n} d\left(v_{i}\right) d\left(w_{2}\right) \\
& =2(2)+2(2)+2(3)+[n-3] 3(3)+2(3)+[n-2] 3(n-2) \\
& =3 n^{2}-3 n+5
\end{aligned}
$$

Note:For $\mathrm{n}=2$, there is only one degree splitting vertex. Therefore, $M_{1}\left(D S\left(P_{2}\right)\right)=M_{2}\left(D S\left(P_{2}\right)\right)=12$.
Theorem 2: For Cycle, $C_{n}, n \geq 3, M_{1}\left(D S\left(C_{n}\right)\right)=n^{2}+9 n, M_{2}\left(D S\left(C_{n}\right)\right)=9 n+3 n^{2}$.

## Proof:

Let $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n}}$ be the vertices of $\mathrm{C}_{\mathrm{n}}$. Let $\mathrm{w}_{1}$ be the degree splitting vertex.
Then $d\left(v_{i}\right)=3$ for all i, $d\left(w_{1}\right)=n$.

$$
\begin{aligned}
M_{1}\left(D S\left(C_{n}\right)\right) & =\sum_{i=1}^{n} d\left(v_{i}\right)^{2}+d\left(w_{1}\right)^{2} \\
& =\sum_{i=1}^{n} 3^{2}+n^{2} \\
& =3^{2}(n)+n^{2} \\
& =n^{2}+9 n . \\
M_{2}\left(D S\left(C_{n}\right)\right) & =\sum_{u v \in E} d(u) d(v) \\
& =\sum_{i=1}^{n} 3(3)+\sum_{i=1}^{n} 3(n) \\
& =9 n+3 n^{2} .
\end{aligned}
$$

Theorem 3: For Wheel $W_{n}, n \geq 4, M_{1}\left(D S\left(W_{n}\right)\right)=2 n^{2}+18 n+2, M_{2}\left(D S\left(W_{n}\right)\right)=8 n^{2}+21 n+1$.

## Proof:

Let $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n}}$ and u be the vertices of $\mathrm{W}_{\mathrm{n}}$. Let $\mathrm{w}_{1}$ and $\mathrm{w}_{2}$ be the degree splitting vertices.
Then $d\left(v_{i}\right)=4$ for all i $d(u)=n+1, d\left(w_{1}\right)=n, d\left(w_{2}\right)=n$.

$$
\begin{aligned}
M_{1}\left(D S\left(W_{n}\right)\right) & =\sum_{i=1}^{n} d\left(v_{i}\right)^{2}+d(u)^{2}+d\left(w_{1}\right)^{2}+d\left(w_{2}\right)^{2} \\
& =\sum_{i=1}^{n} 4^{2}+(n+1)^{2}+n^{2}+1^{2} \\
& =4^{2}(n)+2 n^{2}+2 n+2 \\
& =2 n^{2}+18 n+2 .
\end{aligned}
$$

$$
\begin{aligned}
M_{2}\left(D S\left(W_{n}\right)\right) & =\sum_{u v \in E} d(u) d(v) \\
& =\sum_{i=1}^{n} 4(4)+\sum_{i=1}^{n} 4(n+1)+\sum_{i=1}^{n} 4(n)+(n+1) \\
& =16 n+4 n(n+1)+4 n^{2}+n+1 \\
& =8 n^{2}+21 n+1 .
\end{aligned}
$$

Note:For $\mathrm{n}=3$, there is only one degree splitting vertex, $M_{1}\left(D S\left(W_{3}\right)\right)=80, M_{2}\left(D S\left(W_{n}\right)\right)=160$.
Theorem 4: For the Complete graph $K_{n}, n \geq 3, M_{1}\left(D S\left(K_{n}\right)\right)=n^{2}(n+1), M_{2}\left(D S\left(K_{n}\right)\right)=n^{3}\left(\frac{n+1}{2}\right)$.

## Proof:

Let $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n}}$ be the vertices of $\mathrm{K}_{\mathrm{n}}$. Let $\mathrm{w}_{1}$ be the degree splitting vertex.
Then $d\left(v_{i}\right)=n$ for all i $d\left(w_{1}\right)=n$.

$$
\begin{aligned}
M_{1}\left(D S\left(K_{n}\right)\right) & =\sum_{i=1}^{n} d\left(v_{i}\right)^{2}+d\left(w_{1}\right)^{2} \\
& =\sum_{i=1}^{n} n^{2}+n^{2} \\
& =n^{2}(n)+n^{2} \\
& =n^{2}(n+1) . \\
M_{2}\left(D S\left(K_{n}\right)\right) & =\sum_{u v \in E} d(u) d(v) \\
& =\sum_{i=1}^{n c_{2}} n(n)+\sum_{i=1}^{n} n(n) \\
& =n^{2} \cdot \frac{n(n-1)}{2}+n^{3} \\
& =n^{3}\left(\frac{n+1}{2}\right) .
\end{aligned}
$$

Theorem 5: For the $\operatorname{Star} K_{1, n}, n \geq 2, M_{1}\left(D S\left(K_{1, n}\right)\right)=2 n^{2}+6 n+2, M_{2}\left(D S\left(K_{1, n}\right)\right)=4 n^{2}+3 n+1$.

## Proof:

Let v and $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of $\mathrm{K}_{1, \mathrm{n}}$ and $\mathrm{w}_{1}$ and $\mathrm{w}_{2}$ be the degree splitting vertices. Then, $\mathrm{d}(\mathrm{v})=n+1, d\left(u_{i}\right)=2$ for all i and $d\left(w_{1}\right)=1, d\left(w_{2}\right)=n$

$$
\begin{aligned}
M_{1}\left(D S\left(K_{1, n}\right)\right) & =d(v)^{2}+\sum_{i=1}^{n} d\left(u_{i}\right)^{2}+d\left(w_{1}\right)^{2}+d\left(w_{1}\right)^{2} \\
& =(n+1)^{2}+\sum_{i=1}^{n} 2^{2}+1^{2}+n^{2}
\end{aligned}
$$

$$
\begin{aligned}
& =(n+1)^{2}+n(2)^{2}+1+n^{2} \\
& =2 n^{2}+6 n+2 \\
M_{2}\left(D S\left(K_{1, n}\right)\right) & =\sum_{u v \in E} d(u) d(v) \\
& =\sum_{i=1}^{n} 2(n+1)+\sum_{i=1}^{n} 2(n)+(n+1) 1 \\
& =2 n(n+1)+2 n^{2}+n+1 . \\
& =4 n^{2}+3 n+1 .
\end{aligned}
$$

Theorem 6: For the Complete Bi-partite graph $K_{m, n}, m, n \geq 2$
$M_{1}\left(D S\left(K_{m, n}\right)\right)=m^{2}(n+1)+n^{2}(m+1)+4 m n+m+n$,
$M_{2}\left(D S\left(K_{m, n}\right)\right)=[(m+1)(n+1)] m n+(n+1) m^{2}+(m+1) n^{2}$.

## Proof:

Let $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{m}}$ and $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of $\mathrm{K}_{\mathrm{m}, \mathrm{n}}$ and $\mathrm{w}_{1}$ and $\mathrm{w}_{2}$ be the degree splitting vertices. Then $d\left(v_{i}\right)=n+1, d\left(u_{i}\right)=m+1$ for all i and $d\left(w_{1}\right)=m, d\left(w_{2}\right)=n$.

$$
\begin{aligned}
M_{1}\left(D S\left(K_{m, n}\right)\right) & =\sum_{i=1}^{m} d\left(v_{i}\right)^{2}+\sum_{i=1}^{n} d\left(u_{i}\right)^{2}+d\left(w_{1}\right)^{2}+d\left(w_{1}\right)^{2} \\
& =\sum_{i=1}^{m}(n+1)^{2}+\sum_{i=1}^{n}(m+1)^{2}+m^{2}+n^{2} \\
& =m(n+1)^{2}+n(m+1)^{2}+m^{2}+n^{2} \\
& =m^{2}(n+1)+n^{2}(m+1)+4 m n+m+n . \\
M_{2}\left(D S\left(K_{m, n}\right)\right) & =\sum_{u v \in E} d(u) d(v) \\
& =\sum_{i=1}^{m n}(m+1)(n+1)+\sum_{i=1}^{m}(n+1) m+\sum_{i=1}^{n}(m+1) n \\
& =[(m+1)(n+1)] m n+(n+1) m^{2}+(m+1) n^{2}
\end{aligned}
$$

Theorem 7: For a Path Corona $P_{n}{ }^{+}, n \geq 3, M_{1}\left(D S\left(P_{n}{ }^{+}\right)\right)=2 n^{2}+16 n-6, M_{2}\left(D S\left(P_{n}{ }^{+}\right)\right)=6 n^{2}+8 n$.

## Proof:

Let $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n}}$ and $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of $P_{n}{ }^{+}$. Let $\mathrm{w}_{1}, \mathrm{w}_{2}$ and $\mathrm{w}_{3}$ be the degree splitting vertices.
Then, $d\left(v_{i}\right)=\left\{\begin{array}{cc}3 & i=1, n \\ 4 & \text { otherwise }\end{array}, d\left(u_{i}\right)=2\right.$ for all $i, d\left(w_{1}\right)=2, d\left(w_{2}\right)=n-2$ and $d\left(w_{3}\right)=n$.

$$
\begin{aligned}
M_{1}\left(D S\left(P_{n}^{+}\right)\right) & =\sum_{i=1}^{n} d\left(v_{i}\right)^{2}+\sum_{i=1}^{n} d\left(u_{i}\right)^{2}+d\left(w_{1}\right)^{2}+d\left(w_{1}\right)^{2}+d\left(w_{3}\right)^{2} \\
& =3^{2}+\sum_{i=2}^{n-2} 4^{2}+3^{2}+\sum_{i=1}^{n} 2^{2}+2^{2}+(n-2)^{2}+n^{2}
\end{aligned}
$$

$$
\begin{aligned}
= & (n-2) 16+n(4)+2 n^{2}-4 n+26 \\
= & 2 n^{2}+16 n-6 . \\
M_{2}\left(D S\left(P_{n}^{+}\right)\right)= & \sum_{u v \in E} d(u) d(v) \\
= & d\left(v_{1}\right) d\left(v_{2}\right)+\sum_{i=1}^{n-1} d\left(v_{i}\right) d\left(v_{i+1}\right)+d\left(v_{n-1}\right) d\left(v_{n}\right)+d\left(v_{1}\right) d\left(w_{1}\right)+d\left(v_{n}\right) d\left(w_{1}\right) \\
& +\sum_{i \neq 1, n} d\left(v_{i}\right) d\left(w_{3}\right)+d\left(v_{1}\right) d\left(u_{1}\right)+d\left(v_{n}\right) d\left(u_{n}\right)+\sum_{i=2}^{n-1} d\left(v_{i}\right) d\left(u_{i}\right)+\sum_{i=1}^{n} d\left(u_{i}\right) d\left(w_{2}\right) \\
= & 3(4)+[n-3] 4(4)+3(4)+3(2)+3(2)+[n-2] 4(n-2)+3(2)+3(2)+[n-2] 4(2) \\
& +n 2(n) \\
= & 6 n^{2}+8 n .
\end{aligned}
$$

Note:For $\mathrm{n}=2$, there is only one degree splitting vertex. Therefore, $M_{1}\left(D S\left(P_{2}{ }^{+}\right)\right)=34, M_{2}\left(D S\left(P_{2}{ }^{+}\right)\right)=41$.
Theorem 8: For Cycle Corona, $C_{n}{ }^{+} n \geq 3, M_{1}\left(D S\left(C_{n}{ }^{+}\right)\right)=2 n^{2}+20 n, M_{2}\left(D S\left(C_{n}{ }^{+}\right)\right)=6 n^{2}+24 n$.

## Proof:

Let $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n}}$ and $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of $C_{n}{ }^{+}$. Let $\mathrm{w}_{1}$ and $\mathrm{w}_{2}$ be the degree splitting vertices.
Then $d\left(v_{i}\right)=4, d\left(u_{i}\right)=2$ for all i $d\left(w_{1}\right)=d\left(w_{2}\right)=n$.

$$
\begin{aligned}
M_{1}\left(D S\left(C_{n}^{+}\right)\right) & =\sum_{i=1}^{n} d\left(v_{i}\right)^{2}+\sum_{i=1}^{n} d\left(u_{i}\right)^{2}+d\left(w_{1}\right)^{2}+d\left(w_{1}\right)^{2} \\
& =\sum_{i=1}^{n} 4^{2}+\sum_{i=1}^{n} 2^{2}+n^{2}+n^{2} \\
& =4^{2}(n)+2^{2}(n)+2 n^{2} \\
& =2 n^{2}+20 n
\end{aligned}
$$

$$
M_{2}\left(D S\left(C_{n}^{+}\right)\right)=\sum_{u v \in E} d(u) d(v)
$$

$$
=\sum_{i=1}^{n} 4(4)+\sum_{i=1}^{n} 4(n)+\sum_{i=1}^{n} 4(2)+\sum_{i=1}^{n} 2(n)
$$

$$
=16 n+4 n^{2}+8 n+2 n^{2}
$$

$$
=6 n^{2}+24 n
$$

## II. CONCLUSION

In this paper, I have computed the first and second Zagreb indices of some standard graphs. Further work is going on some special types of graphs and molecular structures.

## III. ACKNOWLEDGEMENT

This work is supported by the Institutional Fund, Mannar Thirumalai Naicker College, Madurai.
