## Abstract

In this paper the concept of soft $\beta W$-Hausdorffness in soft topological spaces is introduced.
Keywords: Soft set, soft $\beta$-open set, Soft topological space, Soft $\beta W$-Hausdorff space.

## I.INTRODUCTION

Most of the real life problems have various uncertainties. A number of theories have been proposed for dealing with uncertainties in an efficient way. In 1999, Molodstov[4] initiated a novel concept of soft set theory, which is completely a new approach for modeling vagueness and uncertainty. In 2011, Shabir and Naz[6] defined soft topological spaces and studied separation axioms. In section II of this paper, preliminary definitions regarding soft sets and soft topological spaces are given. In section III of this paper, the concept of soft $\beta \mathrm{W}$-Hausdorffness in soft topological spaces is introduced and studied.

Throughout this paper, X denotes initial universe and E denotes the set of parameters for the universe X .

## II. PRELIMINARY DEFINITIONS

## Definition: 2.1 [4]

Let $X$ be an initial universe and $E$ be a set of parameters. Let $P(X)$ denotes the power set of $X$ and $A$ be a nonempty subset of E . A pair ( $\mathrm{F}, \mathrm{A}$ ) denoted by $\mathrm{F}_{\mathrm{A}}$ is called a soft set over X , where F is a mapping given by $F: A \rightarrow P(X)$.The family of all soft sets over $X$ with respect to the parameter set $E$ is denoted by $\operatorname{SS}(X)_{E}$.

## Definition 2.2 [3]

Let $F_{A}, G_{B} \in \operatorname{SS}(X)_{E}$. Then $F_{A}$ is soft subset of $G_{B}$, denoted by $F_{A} \widetilde{\simeq} G_{B}$, if
(1) A $\subseteq B$, and
(2) $F(e) \subseteq G(e), \forall e \in A$.

In this case, $F_{A}$ is said to be a soft subset of $G_{B}$ and $G_{B}$ is said to be a soft superset of $F_{A}, G_{B} \cong F_{A}$.

## Definition 2.3 [3]

Two soft subsets $F_{A}$ and $G_{B}$ over a common universe $X$ are said to be soft equal if $F_{A}$ is a soft subset of $G_{B}$ and $G_{B}$ is a soft subset of $F_{A}$.

## Definition 2.4 [3]

$A$ soft set $(F, A)$ over $X$ is said to be a NULL soft set denoted by $\widetilde{\phi}$ or $\phi_{A}$ if for all $e \in A, F(e)=\phi$ (null set).

## Definition 2.5 [3]

A soft set $(F, A)$ over $X$ is said to be an absolute soft set denoted by $\widetilde{A}$ or $X_{A}$ if for all e $\in A, F(e)=X$. Clearly we haveX $\mathrm{A}_{\mathrm{A}}=\phi_{\mathrm{A}}$ and $\phi_{\mathrm{A}}=. \mathrm{X}_{\mathrm{A}}$.

## Definition 2.6 [3]

The union of two soft sets ( $\mathrm{F}, \mathrm{A}$ ) and ( $\mathrm{G}, \mathrm{B}$ ) over the common universe X is the soft set $(\mathrm{H}, \mathrm{C})$, where $C=A \cup B$ and for all $e \in C$,
$H(e)=\left\{\begin{array}{c}F(e), e \in A-B, \\ G(e), e \in B-A, \\ F(e) \cup G(e), e \in A \cap B\end{array}\right.$

## Definition 2.7 [3]

The intersection of two soft sets ( $\mathrm{F}, \mathrm{A}$ ) and ( $\mathrm{G}, \mathrm{B}$ ) over the common universe X is the soft set $(\mathrm{H}, \mathrm{C})$, where $\mathrm{C}=\mathrm{A} \cap \mathrm{B}$ and for all $\mathrm{e} \in \mathrm{C}, \mathrm{H}(\mathrm{e})=\mathrm{F}(\mathrm{e}) \cap \mathrm{G}(\mathrm{e})$.

## Definition 2.8 [6]

Let $(\mathrm{X}, \tau, \mathrm{E})$ be a soft topological space, $(\mathrm{F}, \mathrm{E}) \in \mathrm{SS}(\mathrm{X})_{\mathrm{E}}$ and Y be a non- null subset of X . Then the soft subset of ( $\mathrm{F}, \mathrm{E}$ ) over Y denoted by $\left(\mathrm{F}_{\mathrm{Y}}, \mathrm{E}\right)$ is defined as follows:
$\mathrm{F}_{\mathrm{Y}}(\mathrm{e})=\mathrm{Y} \cap \mathrm{F}(\mathrm{e}), \forall \mathrm{e} \in \mathrm{E}$
In other words, $\left(\mathrm{F}_{\mathrm{Y}}, \mathrm{E}\right)=\mathrm{Y}_{\mathrm{E}} \cap(\mathrm{F}, \mathrm{E})$.

## Definition 2.9 [6]

$\operatorname{Let}(\mathrm{X}, \tau, \mathrm{E})$ be a soft topological space and Y be a non null subset of X . Then $\tau_{Y}=\left\{\left(\mathrm{F}_{\mathrm{Y}}, \mathrm{E}\right):(\mathrm{F}, \mathrm{E}) \in \tau\right\}$ is said to be the relative soft topology on Y and $\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{E}\right)$ is called a soft subspace of $(\mathrm{X}, \tau, \mathrm{E})$.

## Definition 2.10 [1]

Let $F_{A} \in S S(X)_{E}$ and $G_{B} \in S S(Y)_{K}$. The cartesian product $F_{A} \otimes G_{B}$ is defined by $\left(F_{A} \otimes G_{B}\right)(e, k)=F_{A}(e) \times G_{B}(k), \forall$ $(e, k) \in A \times B$.According to this definition $F_{A} \otimes G_{B}$ is a soft set over $X \times Y$ and its parameter set is $E \times K$.

## Definition 2.11 [1]

Let $\left(\mathrm{X}, \tau_{\mathrm{X}}, \mathrm{E}\right)$ and $\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{K}\right)$ be two soft topological spaces. The soft product topology $\tau_{\mathrm{X}} \otimes \tau_{\mathrm{Y}}$ over $\mathrm{X} \times \mathrm{Y}$ with respect to $E \times K$ is the soft topology having the collection $\left\{F_{E} \otimes G_{K} / F_{E} \in \tau_{X}, G_{K} \in \tau_{Y}\right\}$ as the basis.

## Definition 2.12 [6]

Let $(\mathrm{X}, \tau, \mathrm{E})$ be a soft topological space and $\mathrm{F}_{\mathrm{A}} \in \mathrm{SS}(\mathrm{X})_{\mathrm{E}}$. Then the soft interior of $\mathrm{F}_{\mathrm{A}}$, denoted by $\operatorname{int}\left(\mathrm{F}_{\mathrm{A}}\right)$ is defined as the soft union of all soft open subsets of $\mathrm{F}_{\mathrm{A}}$.

Definition 2.13 [6]
Let $(\mathrm{X}, \tau, \mathrm{E})$ be a soft topological space and $\mathrm{F}_{\mathrm{A}} \in \mathrm{SS}(\mathrm{X})_{\mathrm{E}}$. Then the soft closure of $\mathrm{F}_{\mathrm{A}}$, denoted by $\mathrm{cl}\left(\mathrm{F}_{\mathrm{A}}\right)$ is defined as the soft intersection of all soft closed supersets of $\mathrm{F}_{\mathrm{A}}$.

## Definition 2.14 [2]

Let $(\mathrm{X}, \tau, \mathrm{E})$ be a soft topological space and $\mathrm{F}_{\mathrm{A}} \in \mathrm{SS}(\mathrm{X})_{\mathrm{E}}$ then $\mathrm{F}_{\mathrm{A}}$ is called soft $\beta$-open set if $\mathrm{F}_{\mathrm{A}} \subseteq \mathrm{cl}\left(\operatorname{int}\left(\mathrm{cl}\left(\mathrm{F}_{\mathrm{A}}\right)\right)\right)$.

## III. SOFT $\boldsymbol{\beta} \mathbf{W}$-HAUSDORFF SPACES

## Definition 3.1

A Soft topological space ( $\mathrm{X}, \tau, \mathrm{E}$ ) is said to be soft $\boldsymbol{\beta} \mathbf{W}$-Hausdorff space of type $\mathbf{1}$ denoted by $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$ if for every $e_{1}, e_{2} \in E, e_{1} \neq e_{2}$ there exists soft $\beta$-open setsF $F_{A}, G_{B}$ such that $F_{A}\left(e_{1}\right)=X, G_{B}\left(e_{2}\right)=X$ and $F_{A} \cap G_{B}=\widetilde{\phi}$.

## Theorem 3.2

Soft subspace of a $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$ space is $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$.

## Proof

Let $(\mathrm{X}, \tau, \mathrm{E})$ be $\mathrm{a}(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$ space. Let Y be a non null subset of X . Let $\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{E}\right)$ be a soft subspace of $(\mathrm{X}, \tau, \mathrm{E})$ where $\tau_{\mathrm{Y}}=\left\{\left(\mathrm{F}_{\mathrm{Y}}, \mathrm{E}\right):(\mathrm{F}, \mathrm{E}) \in \tau\right\}$ is the relative soft topology on Y . Consider $\mathrm{e}_{1}, \mathrm{e}_{2} \in \mathrm{E}, \mathrm{e}_{1} \neq \mathrm{e}_{2}$ there exists soft $\beta$-open sets $F_{A}, G_{B}$, such that $F_{A}\left(e_{1}\right)=X, G_{B}\left(e_{2}\right)=X$ and $F_{A} \cap G_{B}=\widetilde{\phi}$.
$\operatorname{Here}\left(F_{A}\right)_{Y},\left(G_{B}\right)_{Y}$ are soft $\beta$-open sets.

$$
\text { Also }\left(\mathrm{F}_{\mathrm{A}}\right)_{\mathrm{Y}}\left(\mathrm{e}_{1}\right)=\mathrm{Y} \cap \mathrm{~F}_{\mathrm{A}}\left(\mathrm{e}_{1}\right)
$$

$$
\begin{aligned}
& =\mathrm{Y} \cap \mathrm{X} \\
& =\mathrm{Y}
\end{aligned}
$$

$$
\begin{aligned}
\left(\mathrm{G}_{\mathrm{B}}\right)_{\mathrm{Y}}\left(\mathrm{e}_{2}\right) & =\mathrm{Y} \cap \mathrm{G}_{\mathrm{B}}\left(\mathrm{e}_{2}\right) \\
& =\mathrm{Y} \cap \mathrm{X} \\
& =\mathrm{Y}
\end{aligned}
$$

$$
\begin{aligned}
\left(\left(\mathrm{F}_{\mathrm{A}}\right)_{\mathrm{Y}} \cap\right. & \left.\left(\mathrm{G}_{\mathrm{B}}\right)_{\mathrm{Y}}\right)(\mathrm{e})=\left(\left(\mathrm{F}_{\mathrm{A}} \cap \mathrm{G}_{\mathrm{B}}\right)_{\mathrm{Y}}\right)(\mathrm{e}) \\
& =\mathrm{Y} \cap\left(\mathrm{~F}_{\mathrm{A}} \cap \mathrm{G}_{\mathrm{B}}\right)(\mathrm{e}) \\
& =\mathrm{Y} \cap \widetilde{\phi}(\mathrm{e}) \\
& =\mathrm{Y} \cap \phi \\
\quad= & \phi
\end{aligned}
$$

$\left(F_{A}\right)_{Y} \cap\left(G_{B}\right)_{Y}=\widetilde{\phi}$
Hence $\left(Y, \tau_{Y}, E\right)$ is $(S \beta W-H)_{1}$

## Theorem 3.3

Product of two $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$ spaces is $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$.

## Proof:

Let $\left(\mathrm{X}, \tau_{\mathrm{X}}, \mathrm{E}\right)$ and $\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{K}\right)$ be two $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$ spaces. Consider two distinct points $\left(\mathrm{e}_{1}, \mathrm{k}_{1}\right),\left(\mathrm{e}_{2}, \mathrm{k}_{2}\right) \in \mathrm{E} \times \mathrm{K}$.
Either $\mathrm{e}_{1} \neq \mathrm{e}_{2}$ or $\mathrm{k}_{1} \neq \mathrm{k}_{2}$.
Assume $e_{1} \neq e_{2}$. Since $\left(X, \tau_{X}, E\right)$ is $(S \beta W-H)_{1}$, there exist soft $\beta$-open sets $F_{A}, G_{B}$ such that $F_{A}\left(e_{1}\right)=X, G_{B}\left(e_{2}\right)=X$ and $F_{A} \cap G_{B}=\widetilde{\phi}$.
Here $F_{A} \otimes Y_{K}, G_{B} \otimes Y_{K}$ aresoft $\beta$-open sets
$\left(F_{A} \otimes Y_{K}\right)\left(e_{1}, k_{1}\right)=F_{A}\left(e_{1}\right) \times Y_{K}\left(k_{1}\right)$

$$
=\mathrm{X} \times \mathrm{Y}
$$

$\left(\mathrm{G}_{\mathrm{B}} \otimes \mathrm{Y}_{\mathrm{K}}\right)\left(\mathrm{e}_{2}, \mathrm{k}_{2}\right)=\mathrm{G}_{\mathrm{B}}\left(\mathrm{e}_{2}\right) \times \mathrm{Y}_{\mathrm{K}}\left(\mathrm{k}_{2}\right)$
$=X \times Y$
If for any $(e, k) \in(E \times K),\left(F_{A} \otimes Y_{K}\right)(e, k) \neq \phi$

$$
\begin{aligned}
& \Rightarrow \mathrm{F}_{\mathrm{A}}(\mathrm{e}) \times \mathrm{Y}_{\mathrm{K}}(\mathrm{k}) \neq \phi \\
& \Rightarrow \mathrm{F}_{\mathrm{A}}(\mathrm{e}) \times \mathrm{Y} \neq \phi \\
& \Rightarrow \mathrm{F}_{\mathrm{A}}(\mathrm{e}) \neq \phi \\
& \Rightarrow \mathrm{G}_{\mathrm{B}}(\mathrm{e})=\phi \\
& \Rightarrow \mathrm{G}_{\mathrm{B}}(\mathrm{e}) \times \mathrm{Y}_{\mathrm{K}}(\mathrm{k})=\phi \\
& \Rightarrow\left(\mathrm{G}_{\mathrm{B}} \otimes \mathrm{Y}_{\mathrm{K}}\right)(\mathrm{e}, \mathrm{k})=\phi \\
& \quad \Rightarrow\left(\mathrm{F}_{\mathrm{A}} \otimes \mathrm{Y}_{\mathrm{K}}\right) \cap\left(\mathrm{G}_{\mathrm{B}} \otimes \mathrm{Y}_{\mathrm{K}}\right)=\widetilde{\phi}
\end{aligned}
$$

$$
\Rightarrow \mathrm{G}_{\mathrm{B}}(\mathrm{e})=\phi \quad\left(\text { since } \mathrm{F}_{\mathrm{A}} \cap \mathrm{G}_{\mathrm{B}}=\widetilde{\phi} \Rightarrow \mathrm{F}_{\mathrm{A}}(\mathrm{e}) \cap \mathrm{G}_{\mathrm{B}}(\mathrm{e})=\phi\right)
$$

Assume $\mathrm{k}_{1} \neq \mathrm{k}_{2}$. Since $\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{K}\right)$ is $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{1}$, there exist soft $\beta$-open sets $\mathrm{F}_{\mathrm{A}}, \mathrm{G}_{\mathrm{B}}$, such that $\mathrm{F}_{\mathrm{A}}\left(\mathrm{k}_{1}\right)=\mathrm{Y}, \mathrm{G}_{\mathrm{B}}\left(\mathrm{k}_{2}\right)$ $=Y$ and $F_{A} \cap G_{B}=\widetilde{\phi}$.
Here $X_{E} \otimes F_{A}, X_{E} \otimes G_{B}$ aresoft $\beta$-open sets
$\left(\mathrm{X}_{\mathrm{E}} \otimes \mathrm{F}_{\mathrm{A}}\right)\left(\mathrm{e}_{1}, \mathrm{k}_{1}\right)=\mathrm{X}_{\mathrm{E}}\left(\mathrm{e}_{1}\right) \times \mathrm{F}_{\mathrm{A}}\left(\mathrm{k}_{1}\right)$
$=X \times Y$
$\left(\mathrm{X}_{\mathrm{E}} \otimes \mathrm{G}_{\mathrm{B}}\right)\left(\mathrm{e}_{2}, \mathrm{k}_{2}\right)=\mathrm{X}_{\mathrm{E}}\left(\mathrm{e}_{2}\right) \times \mathrm{G}_{\mathrm{B}}\left(\mathrm{k}_{2}\right)$
$=\mathrm{X} \times \mathrm{Y}$
If for any $(e, k) \in E \times K,\left(X_{E} \otimes F_{A}\right)(e, k) \neq \phi$
$\Rightarrow X_{\mathrm{E}}(\mathrm{e}) \times \mathrm{F}_{\mathrm{A}}(\mathrm{k}) \neq \phi$
$\Rightarrow \mathrm{X} \times \mathrm{F}_{\mathrm{A}}(\mathrm{k}) \neq \phi$

$$
\begin{aligned}
& \quad \Rightarrow \mathrm{F}_{\mathrm{A}}(\mathrm{k}) \neq \phi \\
& \Rightarrow \mathrm{G}_{\mathrm{B}}(\mathrm{k})=\phi \quad\left(\text { Since } \mathrm{F}_{\mathrm{A}} \cap \mathrm{G}_{\mathrm{B}}=\widetilde{\phi} \Rightarrow \mathrm{F}_{\mathrm{A}}(\mathrm{k}) \cap \mathrm{G}_{\mathrm{B}}(\mathrm{k})=\phi\right) \\
& \Rightarrow \mathrm{X}_{\mathrm{E}}(\mathrm{e}) \times \mathrm{G}_{\mathrm{B}}(\mathrm{k})=\phi \\
& \quad \Rightarrow\left(\mathrm{X}_{\mathrm{E}} \otimes \mathrm{G}_{\mathrm{B}}\right)(\mathrm{e}, \mathrm{k})=\phi \\
& \quad \Rightarrow\left(\mathrm{X}_{\mathrm{E}} \otimes \mathrm{~F}_{\mathrm{A}}\right) \cap\left(\mathrm{X}_{\mathrm{E}} \otimes \mathrm{G}_{\mathrm{B}}\right)=\widetilde{\phi}
\end{aligned}
$$

$$
\text { Hence }\left(\mathrm{X} \times \mathrm{Y}, \tau_{\mathrm{X}} \otimes \tau_{\mathrm{Y}}, \mathrm{E} \times \mathrm{K}\right) \text { is }(\mathrm{S} \beta \mathrm{~W}-\mathrm{H})_{1} .
$$

## Definition 3.4

A soft topological space ( $\mathrm{X}, \tau, \mathrm{E}$ ) is said to be soft $\boldsymbol{\beta W}$-Hausdorff space of type 2 denoted by $(S \beta W-H)_{2}$ if for every $e_{1}, e_{2} \in E, e_{1} \neq e_{2}$ there exists soft $\beta$-open sets $F_{E}, G_{E}$, such that $F_{E}\left(e_{1}\right)=X, G_{E}\left(e_{2}\right)=X$ and $\mathrm{F}_{\mathrm{E}} \cap \mathrm{G}_{\mathrm{E}}=\widetilde{\phi}$

## Theorem 3.5

Soft subspace of $\mathrm{a}(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{2}$ space is $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{2}$.

## Proof

Let $(\mathrm{X}, \tau, \mathrm{E})$ be a $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{2}$ space. Let Y be a non-null subset of X . Let $\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{E}\right)$ be a soft subspace of $(\mathrm{X}, \tau$, $E)$ where $\tau_{Y}=\left\{\left(F_{Y}, E\right):(F, E) \in \tau\right\}$ is the relative soft topology on Y. Consider $e_{1}, e_{2} \in E, e_{1} \neq e_{2}$ there exist soft $\beta$ open sets $F_{E}, G_{E}$, such that $F_{E}\left(e_{1}\right)=X, G_{E}\left(e_{2}\right)=X$ and $F_{E} \cap G_{E}=\widetilde{\phi}$.
Here $\left(\left(\mathrm{F}_{\mathrm{E}}\right)_{\mathrm{Y}}, \mathrm{E}\right),\left(\left(\mathrm{G}_{\mathrm{E}}\right)_{\mathrm{Y}}, \mathrm{E}\right)$ aresoft $\beta$-open sets.
Also $\left(\mathrm{F}_{\mathrm{E}}\right)_{\mathrm{Y}}\left(\mathrm{e}_{1}\right)=\mathrm{Y} \cap \mathrm{F}_{\mathrm{E}}\left(\mathrm{e}_{1}\right)$
$=\mathrm{Y} \cap \mathrm{X}$
$=\mathrm{Y}$
$\left(\mathrm{G}_{\mathrm{E}}\right)_{\mathrm{Y}}\left(\mathrm{e}_{2}\right)=\mathrm{Y} \cap \mathrm{G}_{\mathrm{E}}\left(\mathrm{e}_{2}\right)$

$$
=\mathrm{Y} \cap \mathrm{X}
$$

$$
=\mathrm{Y}
$$

$$
\begin{aligned}
&\left(\left(\mathrm{F}_{\mathrm{E}}\right)_{\mathrm{Y}} \cap\left(\mathrm{G}_{\mathrm{E}}\right)_{\mathrm{Y}}\right)(\mathrm{e})=\left(\left(\mathrm{F}_{\mathrm{E}} \cap \mathrm{G}_{\mathrm{E}}\right)_{\mathrm{Y}}\right)(\mathrm{e}) \\
&=\mathrm{Y} \cap\left(\mathrm{~F}_{\mathrm{E}} \cap \mathrm{G}_{\mathrm{E}}\right)(\mathrm{e}) \\
&=\mathrm{Y} \cap \widetilde{\phi}(\mathrm{e}) \\
&=\mathrm{Y} \cap \phi \\
&=\phi \\
&\left(\mathrm{F}_{\mathrm{A}}\right)_{\mathrm{Y}} \cap\left(\mathrm{G}_{\mathrm{B}}\right)_{\mathrm{Y}}= \widetilde{\phi} \\
& \text { Hence }\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{E}\right) \text { is }(\mathrm{S} \beta \mathrm{~W}-\mathrm{H})_{2} .
\end{aligned}
$$

## Theorem 3.6

Product of two $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{2}$ spaces is $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{2}$.

## Proof

Let $\left(\mathrm{X}, \tau_{\mathrm{X}}, \mathrm{E}\right)$ and $\left(\mathrm{Y}, \tau_{\mathrm{Y}}, \mathrm{K}\right)$ be two $(\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{2}$ spaces. Consider two distinct points
$\left(e_{1}, k_{1}\right),\left(e_{2}, k_{2}\right) \in E \times K$.
Either $\mathrm{e}_{1} \neq \mathrm{e}_{2}$ or $\mathrm{k}_{1} \neq \mathrm{k}_{2}$.
Assume $e_{1} \neq e_{2}$. Since $\left(X, \tau_{X}, E\right)$ is $(S \beta W-H)_{2}$, there exist soft $\beta$-open setsF $F_{E}, G_{E}$, such that $F_{E}\left(e_{1}\right)=X, G_{E}\left(e_{2}\right)=X$ and $F_{E} \cap G_{E}=\widetilde{\phi}$.
Here $\mathrm{F}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}, \mathrm{G}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}$ aresoft $\beta$-open sets
$\left(\mathrm{F}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}\right)\left(\mathrm{e}_{1}, \mathrm{k}_{1}\right)=\mathrm{F}_{\mathrm{E}}\left(\mathrm{e}_{1}\right) \times \mathrm{Y}_{\mathrm{K}}\left(\mathrm{k}_{1}\right)$

$$
=\mathrm{X} \times \mathrm{Y}
$$

$\left(\mathrm{G}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}\right) \underset{\left(\mathrm{e}_{2}, \mathrm{k}_{2}\right)}{=\mathrm{X} \times \mathrm{Y}}=\mathrm{G}_{\mathrm{E}}\left(\mathrm{e}_{2}\right) \times \mathrm{Y}_{\mathrm{K}}\left(\mathrm{k}_{2}\right)$
If for any $(\mathrm{e}, \mathrm{k}) \in(\mathrm{E} \times \mathrm{K}),\left(\mathrm{F}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}\right)(\mathrm{e}, \mathrm{k}) \neq \phi$

$$
\begin{aligned}
& \Rightarrow \mathrm{F}_{\mathrm{E}}(\mathrm{e}) \times \mathrm{Y}_{\mathrm{K}}(\mathrm{k}) \neq \phi \\
& \Rightarrow \mathrm{F}_{\mathrm{E}}(\mathrm{e}) \times \mathrm{Y} \neq \phi
\end{aligned}
$$

```
\(\Rightarrow \mathrm{F}_{\mathrm{E}}(\mathrm{e}) \neq \phi\)
\(\Rightarrow \mathrm{G}_{\mathrm{E}}(\mathrm{e})=\phi \quad\left(\right.\) Since \(\left.\mathrm{F}_{\mathrm{E}} \cap \mathrm{G}_{\mathrm{E}}=\widetilde{\phi} \Rightarrow \mathrm{F}_{\mathrm{A}}(\mathrm{e}) \cap \mathrm{G}_{\mathrm{E}}(\mathrm{e})=\phi\right)\)
\(\Rightarrow \mathrm{G}_{\mathrm{E}}(\mathrm{e}) \times \mathrm{Y}_{\mathrm{K}}(\mathrm{k})=\phi\)
\(\Rightarrow\left(\mathrm{G}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}\right)(\mathrm{e}, \mathrm{k})=\phi\)
\(\Rightarrow\left(\mathrm{F}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}\right) \cap\left(\mathrm{G}_{\mathrm{E}} \otimes \mathrm{Y}_{\mathrm{K}}\right)=\widetilde{\phi}\)
Similarly, one can prove the case when \(\mathrm{k}_{1} \neq \mathrm{k}_{2}\).
Hence \(\left(\mathrm{X} \times \mathrm{Y}, \tau_{\mathrm{X}} \otimes \tau_{\mathrm{Y}}, \mathrm{E} \times \mathrm{K}\right)\) is \((\mathrm{S} \beta \mathrm{W}-\mathrm{H})_{2}\).
```

## IV. CONCLUSION

In this paper the concept of Soft $\beta \mathrm{W}$-Hausdorff spaces is introduced and some basic properties regarding this concept are proved.
